SECTION A

QUESTION 1

1.1	1.1.1	A
	1.1.2	C
	1.1.3	B
	1.1.4	A
	1.1.5	D
	1.1.6	A
	1.1.7	D
	1.1.8	C
	1.1.9	B
	1.1.10	A
	1.1.11	B
	1.1.12	C
	1.1.13	A
	1.1.14	B
	1.1.15	D

(15 × 1) (15)

1.2	1.2.1	False
	1.2.2	True
	1.2.3	True
	1.2.4	True
	1.2.5	True
	1.2.6	True
	1.2.7	False
	1.2.8	False
	1.2.9	False
	1.2.10	True
	1.2.11	True
	1.2.12	False
	1.2.13	True
	1.2.14	False
	1.2.15	False

(15 × 1) (15)

1.3	1.3.1	plane
	1.3.2	volume
	1.3.3	symbol
	1.3.4	Negative space
	1.3.5	Luminance
	1.3.6	serif
	1.3.7	Balance
	1.3.8	texture
	1.3.9	Tranquility
	1.3.10	Emphasis
	1.3.11	Sans serif
	1.3.12	Kerning
	1.3.13	line
	1.3.14	Tranquility
	1.3.15	pictograph

(15 × 1) (15)

1.4	1.4.1	E
	1.4.2	F
	1.4.3	A
	1.4.4	B
	1.4.5	C

(5 × 1) (5)
[50]

TOTAL SECTION A: 50

SECTION B

QUESTION 2

2.1 2.1.1 Uses the same techniques✓ as traditional animation, but instead of using many physical objects it uses computer technology and applications to do the same✓

2.1.2 Though 3D-computer animation differs from traditional animation similar principles of movement and composition are used.✓ But while traditional animation depends on the ability to draw 3D-animation depends on computer applications.✓

2.1.3 Used for typography, for example animated logos.✓ It differs from the other types of animation as it is not character or story driven,✓ it is purely the art of creatively moving graphic elements or text.

2.1.4 Stop motion is done by taking a photo of an object,✓ then moving it slightly, taking photos repeatedly.✓

(4 × 2) (8)

2.2 Often saved as GIF, CSS, SVG or video✓ they can be anything from a simple underline that appears when one hovers over a word to a full-screen video or background image on the web.✓ (2)

2.3 Process of recording the movement✓ of objects or people.✓ (2)

2.4
- Point or omni light
- Directional light
- Spotlight
- Area light
- Volume light
- Ambient light (Any 5 × 1) (5)

2.5
- Computer microphone
- Sound card
- Computer speaker
- Computer mouse
- Keyboard (Any 3 × 1) (3)

[20]

QUESTION 3

3.1
- 3D Animation Software
- 3D Movie Maker
- Autodesk 3d Max
- Autodesk Maya
- Autodesk Motion Builder
- Adobe Photoshop
- Blender
- Adobe After Effects
- Lightwave 3D (Any 3 × 1) (3)

3.2 3.2.1 Area A – The left zone✓ represents the white and light areas✓ of the image.
Area C – The right zone✓ represents black and grey areas.✓
Area B – The middle zone✓ represents medium and grey areas.✓
(3 × 2) (6)

3.2.2 Image opacity tool (2)

3.2.3 To change, soften or emphasise features (2)

3.3
- Speaker
- Tweeter
- Subwoofer (Any ONE) (1)

3.4
- Design
- Modeling
- Texturing and materials
- Lighting
- Animation
- Rendering (6)

[20]

QUESTION 4

4.1
- Bump mapping✓ – technique used in computer graphics for simulating bumps and wrinkles on the surface of an object.✓ This is achieved by disturbing the usual surface of the object✓ and then using the disturbed surface during lighting designs.
- Procedural mapping✓ – Instead of creating an image by defining a large, unchanging block of pixels,✓ procedurals create the texture from the ground up.✓
- Texture mapping – a graphic design process in which a two-dimensional (2D) surface,✓ called a texture map, is wrapped around a three-dimensional (3D)✓ object. Thus the 3D-object acquires a surface texture similar to that of the 2D-surface✓. (Any 2 × 3) (6)

4.2 Cassette tape
- Used to store sequential data
- Used to retrieve sequential data
- Tape storage is cheaper
- Tape saves analogue music (Any TWO)

USB
- Used to store data randomly
- Used to retrieve data randomly
- Access is faster
- USB saves digital music (Any TWO)

(2 + 2) (4)

4.3
- Resolution✓

Increasing the resolution enables the capture of finer details on the image.✓
- Bit depth✓

Increasing the bit depth enables the capture of more gray shades or colour tones.✓
- Image cropping✓

It is the removal of the outer parts of an image to improve framing, highlight subject matter or change aspect ratio.✓
- Colour adjustment

This can be used to change the overall tone of the image and also to remove unwanted colours from the image. ✓
- Image softening✓

Softening a photo creates a dreamy, glossy effect that mimics the effect produced by a high quality soft-focus lens.✓
- Noise reduction✓

Images taken with both digital cameras and conventional film cameras will always pick up noise from a variety of sources and must be removed. (3 × 2) (6)

4.4 The RGB colour model is used by monitors, televisions, scanners and digital cameras.✓ A monitor uses small bands of red, green, and blue light✓ to generate colour. RGB is additive because when you add all three colours together, you get white light; when you turn off all three lights, you get black. By mixing varying amounts of red, green and blue light, you can create most other colours.
The paper of a magazine or catalogue can't generate light like a computer monitor. It relies on the reflected light,✓ and the subtractive colour✓ model CMYK. When you add cyan, magenta and yellow together (CMY) you tend to get a colour close to black, and when you don't lay down any ink you get white. The fourth color black is added for practical economic reasons. All commercial, full-colour printing uses CMYK ink. (2 × 2) (4)
[20]

QUESTION 5

5.1
- Normal lenses
- Zoom lenses
- Telescopic lenses
- Standard lenses (Any 3 × 1) (3)

5.2 5.2.1 Graduated filters can be used to darken a bright sky✓ so that both the sky and subject can be properly exposed.✓

5.2.2 A neutral density filter blocks light.✓ Less light passes through the lens✓ and reaches the camera's sensor (or film).

5.2.3 UV filters reduce haziness✓ created by ultraviolet lights, and they also protect the expensive lens.✓

5.2.4 Used for face shots✓ and to avoid shadows.✓

5.2.5 It keeps the camera steady ✓ during exposure. This is still the simplest, surest and most direct way to ensure outstanding picture quality.✓

(5 × 2) (10)

5.3 5.3.1 High camera angle means the camera looks down on the subject from a high angle.✓ High angle shots can make the subject seem vulnerable✓ or powerless when it is applied with the correct mood, setting and effects.

5.3.2 Low camera angle is a shot anywhere below the eye line sometimes even below the subject's feet.✓ It makes the subject look strong✓ and powerful.

(2 × 2) (4)

5.4
- Broadband noise
- Narrowband noise
- Impulse noises
- Irregular noises

(Any 3 × 1) (3)

[20]

QUESTION 6

6.1 6.1.1 Antagonist – character or a group of characters in opposition✓ to the protagonist or the main character.✓

6.1.2 That hero/heroine might also be the gentle type,✓ the healer, the physician, the nurse or the saint of Biblical tales. The hero figure might be the person who doesn't even start out that way.✓

(2 × 2) (4)

6.2 6.2.1 A sound or sounds caused by the reflection of sound waves✓ from a surface back to the listener.✓ The delay is proportional to the distance of the reflecting surface from the source and the listener.

6.2.2 Audio effect created by an effect unit recording an input signal✓ to an audio storage medium and playing it back after a time.✓

6.2.3 Created when a sound or signal is reflected✓ causing a large number of reflections to build up✓ and then decay.

6.2.4 Forms of audio signal processing used to alter the sound✓ of amplified electric musical instruments, usually by increasing their gain.✓

(4 × 2) (8)

6.3 The tempo of the track is the speed of the track.✓ Some music is slow and some are fast.✓

Pitch represents the perceived fundamental frequency of sound.✓ Somebody who has inhaled a helium balloon will have a high frequency voice and hence a high-pitched voice.✓ (2 + 2) (4)

6.4 .doc, docx
.rtf
.pdf
.docxml
.odt
.txt
.wpd
.rtx Word
Rich Text Format
Portable document format
Microsoft Word XML Document
Open Document Text Document
Plain Text File
WordPerfect Document
Rich Text Document (Any 3 × 1) (3)

6.5 When you crop an image or photo, you cut out or remove some parts of the image.✓. (1)
