SECTION B

QUESTION 2

2.1 2.1.1 The adding of three separate levels of typography in the design of posters is a great place to start and will be necessary for many other designs.✓ Visual hierarchy refers to the arrangement or presentation of elements in a way that implies importance.✓ In other words, visual hierarchy influences the order in which the human eye perceives what it sees.✓ This order is created by the visual contrast between forms in a field of perception.✓ (Any 3 × 1) (3)

2.1.2 Level ONE:
Generally, the level-one typography will be the most important content✓ or information;✓ this will and is usually the most immediately visible typographic element in the design.✓ (3)

2.1.3

- Level TWO:
  Level-two elements usually help organise the design into sections✓ or groups of related information together.✓ They should not stand out as much as your level-one type,✓ but should have the ability to clearly direct viewers to the different parts of the design and help them navigate it easily.✓
- Level THREE
  For a text-heavy layout,✓ the level-three typography is generally the 'meat' of the design.✓ This is where the copywriting lives, where the viewer gets the message of the design.✓ It could be long or short; it could be a whole article, a short note, or just a brief description.✓ But the primary concern and purpose for this level is that it's easy to read, since the font size will likely be somewhat small.✓
- As an example, the design of the respective poster is simple, but still has at least three levels of typographic hierarchy. You could say that the product name A is level one;✓ the heading TYPO-GRAPHY SEMINAR is level two, and the small print description is level three. Notice how the description paragraph is set in an easy-to-read serif with a generous amount of spacing between lines – this is also known as 'leading'.✓ (Any 2 × 2) (4)

2.1.4

- Flexible location✓
  One of the greatest advantages that posters have is the ability to be placed almost anywhere possible.✓ They can be placed even inside a toilet stall's door, at a construction site, even on a railway station or lamppost along a busy road; posters can be placed deliberately to reach the intended audience.✓
- Expense✓
  Even when we consider the cost of having the posters put up, it still works out to be a fairly low-cost way of advertising.✓ All that's needed is a graphic designer, copywriter and printing company. Small-business owners can even hang posters themselves.✓
- Repetition✓
  When in a subway station, it's not unusual to see the same poster more than once, sometimes even to the point of two posters alternating along the platform.✓ And why not? People tend to be exposed to posters repeatedly in the same location.✓
- Active decisions✓
  Posters are seen by people who are out and about.✓ A well-placed poster with a call to action, such as 'see it today' or 'ask the teller for more information'✓ is likely to reach people who are in a position to be converted into customers almost immediately.✓ (Any THREE plus description) (3 × 2) (6)

2.2 One of the basics of painting and photography, the Rule of Thirds is a technique designed to help artists and photographers build drama✓ and interest in a piece.✓ The rule states that a piece should be divided into nine✓ squares of equal size, with two horizontal lines intersecting two vertical lines.✓ (Any 2 × 1) (2)

2.3
- JPEG/JFIF
- JPEG 2000
- Exif.
- TIFF
- GIF
- BMP
- PNG
- PPM, PGM, PBM, and PNM (Any 2 × 1) (2)

QUESTION 3

3.1
- Animation Is an attention grabber✓
  The World Wide Web is full of websites in your line of business.✓ Since you are competing with millions of other sites, having a specific unique feature will work positively in making your site more notable.✓
- Web animation makes your website stand out✓
  Most of the websites have static content. Adding animation to your site will make it stand out from the crowd.✓ As mentioned, there are many different ways you can make use of animation to give your website a unique look.✓
- Animation achieves the impossible✓
  In most cases, the reason why most people use animation in their websites is to achieve something that is impossible to achieve using photos or real videos.✓ If there is something that you might find impossible to express clearly using text or photos, animation will do a great job filling up this gap.✓
- Messages through animation last longer✓
  Any message you pass through visual and audio presentation will last longer in the mind of your audience.✓ A short animated video introducing products/service or your brand can have significant impact on the number of people visiting your website.✓
- Flexibility✓
  Animation is flexible and can give you the advantage of introducing a number of products with a short simple video. Some visitors do not have the time to flip through the website looking for specific products or services. Using an animated video can help you introduce all the services all at once.✓

- Traffic will grow✓
  Animation has the role of grabbing people's attention, so when they visit the website they will be easier hooked onto a page if it features animation.✓ Animation can also be very colourful and transfer deep messages.✓ With animation, people can get the idea that the website is alive and active and that will also influence them to visit your page more often.✓
- Advertisements✓
  Advertisement can be used in a completely new light when it can be incorporated through animation.✓ Using animation to showcase deals or offers might be a fantastic way for your website to profit greatly while also maintaining the website attractively, without boring, static banners and posters.✓
- Better medium✓ The simple fact that animation makes for a better medium for any kind of message means that artists and animators can use fewer resources to create effective pieces.✓

(Any FIVE plus description) (5 × 2) (10)

3.2
- Small file size✓
  One of the main advantages of using animated gifs is the size which can be relatively smaller compared with other file formats.✓ Moreover, this can be advantageous when loading images online as they can load quicker without losing its quality.✓
- Professional looking images✓
  Aside from the small file sizes when using animated gifs, these types can also support transparent backgrounds. This will likewise help in providing a more professional look to a particular website having animation over a varied background.✓
- Convey messages better✓
  Another advantage for animated gifs is that it can show any thought in a much better way than in other media. It can show movements and emotions that a regular image can't possibly do.✓ More so, this can be perfect when making tutorial animations that can enhance the experience. Take note that younger audiences can easily be entertained with animations, so it can really make them want to pay attention to details.✓

(Any ONE plus explanation) (1 × 2) (2)

3.3 3.3.1 Roto-scoping is a technique used in physical animation.✓ This technique allows human users to trace drawings frame by frame. It can also bring a sense✓ of practicality to projects and was heavily used in developing the kinds of modern physical animation used today.✓ (Any 2 × 1)

3.3.2 Motion tracking assists in tracking the movement of objects and transferring the sensed data to an application for further processing.✓ Motion tracking includes capturing the motions of objects matching them with its stored motion template.✓ This has a wide range of applications such as in military, entertainment, sports, medical applications, validation of computer vision and robotics. Furthermore, it is also used in film making and in video game development.✓ In many areas, motion tracking is often called motion capture, whereas in film making and games, motion tracking is commonly called match moving.✓

3.3.3 Key frame is a location on a timeline which marks the beginning or end of a transition.✓ It holds special information that defines where a transition should start or stop. The intermediate frames are interpolated over time between those definitions to create the illusion of motion.✓ In computer animation, like 3D animation or non-linear video editing, this interpolation is performed mathematically by the CPU.✓ (Any 2 × 1)

3.3.4 Three-point lighting is one of the oldest lighting techniques used in shooting video.✓ The technique uses three lights called the key light,✓ fill light✓and back light.✓ Naturally you will need three lights to utilise the technique fully, but the principles are still important even if you only use one or two lights.✓ As a rule if you only have one light, it becomes the key,✓ and if you have 2 lights, one is the key and the other is either the fill or the backlight.✓ (Any 2 × 1)

QUESTION 4

4.1 4.1.1 The exposure triangle is a common way of associating the three variables✓ that determine the exposure of a photograph:✓ aperture,✓ shutter speed✓ and ISO.✓ One must balance all three of these to achieve a desired result; an adjustment of one requiring adjustments of at least one of the others.✓

International Standards Organisation✓

ISO stands for International Standards Organisation and it refers to the industry standard for sensitivity of mixture-based film, with 100 ISO being not so sensitive to 1600 ISO, which is extremely sensitive to light.✓

In digital photography ISO measures the sensitivity of the image sensor✓. The same principles apply as in film photography: the lower the number the less sensitive your camera is to light and the finer the grain.✓ Higher ISO settings are generally used in darker situations to get faster shutter speeds.✓ (Any 3 × 1)

4.1.2 The length of time a camera shutter is open to expose light into the camera sensor.✓ Shutter speeds are typically measured in fractions of a second✓, when they are under a second. Slow shutter speeds allow more light into the camera sensor and are used for low-light and night photography,✓ while fast shutter speeds help to freeze motion. Examples of shutter speeds: 1/15 (1/15th of a second), 1/30, 1/60, 1/125.✓ (Any 3 × 1)

4.1.3 A hole within a lens, through which light travels into the camera body.✓ The larger the hole, the more light passes to the camera sensor.✓ Aperture also controls the depth of field,✓ which is the portion of a scene that appears to be sharp.✓ If the aperture is very small, the depth of field is large,✓ while if the aperture is large, the depth of field is small.✓ In photography, aperture is typically expressed in 'f' numbers (also known as 'focal ratio', since the f-number is the ratio of the diameter of the lens aperture to the length of the lens). Examples of f-numbers are: f/1.4, f/2.0, f/2.8, f/4.0, f/5.6, f/8.0.✓ (Any 3 × 1)

(3 × 3) (9)

4.2
- Film cameras are often more durable and hardy than digital cameras; they are more able to stand up to heat, cold, and inclement weather.✓✓
- Film cameras do not suffer from 'shutter lag,' the gap between the time you press the shutter button and the camera actually snaps the photo. Shutter lag can cause you to miss the shot, especially when your subject is a moving target, such as an animal or a small child.✓✓
- Old-school single-lens reflex film cameras require no batteries if you are shooting outdoors in natural daylight.✓✓
- Many advocates of film photography also consider film images to be sharper, with crisper black-and-white resolution and richer colour saturation.✓✓
- Similar to film photography where you need to be also familiar with working in the dark room, one needs to have a measure of computer skills. Not only will you be storing your photographs in the computer; operating the camera is like operating a small computer. You really have to be computer literate in order to maximize the functions of your camera.✓✓
- The other advantage is equipment is cheap, there are loads of high quality 35mm SLR's available for a fraction of their original value and there are few upfront costs unless you add in a darkroom, even then the equipment (enlargers, lenses etc.) are comparatively cheap.✓✓
- With film, you can adjust the shutter speed, the f-stop and the focus, meaning you have the power of depth of field.✓✓

(Any FOUR plus description) (4 × 2) (8)

4.3 First, the single-lens reflex technology determines how the shutter✓ operates to allow light through the lens and onto the sensor.✓ Second, the digital aspect of the camera means that the camera uses a digital sensor to capture the image instead of a piece of film.✓ Like all cameras, a DSLR works by manipulating light.✓ Thus, for DSLR (digital SLR) the only thing that is changed is that instead of an actual roll film,✓ you have a CMOS sensor that actually captures the image in a pixel format.✓ (Any 3 × 1) (3)

QUESTION 5

5.1
- Squash and stretch
- Secondary action
- Anticipation
- Timing and spacing
- Staging
- Arcs and path of action
- Straight ahead and pose to pose
- Exaggeration
- Follow through and overlapping action
- Solid drawing
- Slow-in and slow-out
- Appeal (Any 6 × 2) (12)

5.2 5.2.1 Scan line rendering is an algorithm for visible surface determination,✓ in 3D computer graphics, that works on a row-by-row basis rather than a polygon-by-polygon or pixel-by-pixel basis.✓

5.2.2 A simulation of movement created by displaying a series of pictures, or frames.✓ Whereas video takes continuous motion and breaks it up into discrete frames, animation starts with independent pictures and puts them together to form the illusion of continuous motion.✓

5.2.3 This 3D Rotation tool in Flash✓ can be used on any movie clip, for instance to rotate and transform the symbol around x, y, and z axes.✓

5.2.4 3D rendering is the 3D computer graphics process of automatically converting 3D wire frame models✓ into 2D images on a computer. 3D renders may include photorealistic effects or non-photorealistic rendering.✓

QUESTION 6

6.1 Once a saint visited a town for some days. In that town also lived a very wealthy trader. 'I am not sure if it would be right for me to take your money' the saint said. 'I am wealthy because I am content with whatever I have and you are a beggar because no matter how much you possess still you are always dissatisfied and begging for more'. (5)

6.2 The saint (1)

6.3
- Good characters
  Characters are unique, deviate from conventional in some way.
- Dialogue
  There is dialogue between the characters of the story so viewers can follow the story.
- Setting
  All of the settings are so interesting yet believable. The biggest mistake producers will make is taking it too far, thus sacrificing believability.
- Plot
  A great plot requires everything mentioned beforehand, clever writing that is original and doesn't fall into cheap tricks to pull viewers back and – most importantly – has self-understanding and maturity.
- Dynamism
  The characters in the story are changing with time as the story develops.

(Any 3 × 2) (6)

6.4 Person versus person (2)

6.5 6.5.1 The saint
6.5.2 The people coming to seek advice from the saint
6.5.3 The trader
