SECTION A

QUESTION 1

Various options are given as possible answers to the following questions. Choose the answer and write only the letter (A–D) next to the question number (1.1–1.10) in the ANSWER BOOK.

1.1 Which ONE of the statements regarding bacteria is true?

A ALL types of bacteria cause food poisoning.
B Freezing makes food last longer by killing bacteria.
C Bacteria grow fastest in warm conditions.
D ALL bacteria need air to survive.

1.2 At work, the best way to dry your hands after washing is:

A Using a warm air dryer
B Giving them a shake
C Using a cotton towel
D Using a paper towel

1.3 When cooking food, what temperature should you cook it to?

A 63°
B 70° for 2 minutes
C 65°
D 63° for 2 minutes

1.4 Why is it important to add the chemical to the water and NOT the water to the chemical?

A If you add the chemical to water, you know the correct dilution ratio.
B Some chemicals need so little to use that you would not see the amount in a container if you added the water last.
C The water is cheaper than the chemical, so you use fewer chemicals by adding the chemical to the water.
D There is less chance of a chemical reaction adding the chemical to the water and not the other way around.

1.5 What does a disinfectant do?

A Removes dirt and grease.
B Reduces bacteria to a safe level.
C Removes dirt, grease and kills bacteria.
D Kills bacteria.

1.6 Which groups of people are more at risk from food poisoning or food-borne illness?

A Chefs, food handlers, young children and sick people
B Elderly, young children, pregnant women, sick people
C Young children, chefs and pregnant women
D Elderly, young children and sick people

1.7 A fire consisting of wood, plastic and paper is classified as:

A Class A
B Class B
C Class C
D Class D

1.8 In case of electrical fire, which fire extinguisher should be applied?

A Dry powder
B Foam
C CO^2 and dry powder
D Water

1.9 Which factors influence the effectiveness of a chemical sanitiser?

A Concentration, temperature, contact time, pH, and water hardness
B Concentration, protein, acidity, air temperature, strength
C Concentration, water activity, reactivity, pressure, density
D Concentration, absorbency, moisture, alkalinity, salinity

1.10 What must a food handler with an infected hand wound do, to work safely with food?

A Avoid working with raw food until the wound is completely dry.
B Apply hand sanitiser to the wound.
C Cover the wound with an impermeable cover and wear a single-use glove.
D Place a bandage on the wound.

QUESTION 2

Indicate whether the following statements are TRUE or FALSE. Choose the answer and write 'True' or 'False' next to the question number (2.1–2.10) in the ANSWER BOOK.

2.1 You can reheat leftovers as many times as you like.

2.2 If something is cooked on the outside, it will definitely be cooked on the inside.

2.3 Most food poisoning bacteria will be activated by cooking.

2.4 Fruits and vegetables should be washed, even if you are peeling them.

2.5 The temperature at which you cook leftovers does not matter because it is already cooked.

2.6 Pregnant women, infants, seniors and people with a weakened immune system are at greater risk of developing food-borne illness.

2.7 The temperature of the bain-marie should be 60 °C or higher.

2.8 The purpose of detergent, which is a chemical product, is to kill bacteria.

2.9 If potentially hazardous foods are to be displayed or sold hot, they must be kept at a temperature of 30 °C or higher.

2.10 The temperature in a dry store should be between 11 °C and 18 °C.

SECTION B

QUESTION 4

4.1 Read the accounts of the following accidents that have taken place in various kitchens and explain in each incident how the situation could have been handled better to have avoided the accident from happening. Safety

4.1.1 'At one of the restaurants where I was working, we had a newbie that had never worked in the business before. We stuck all new people on the fryers to start off, figuring they could do the least amount of damage there. Well, this guy decided to try to batter and fry FROZEN fish! Needless to say, the minute the fish went into the fryer, the oil bubbled up and completely engulfed his head, resulting in severe burns almost all the way up to his elbow.'

4.1.2 'It was an extremely busy Friday night; we were getting our tails handed to us and it was time to clean up. Juan, my fry cook, was cleaning the fryers when his tongs fell in the fryer, and, I don't really know what he was thinking, he put his whole arm in the fryer to get the tongs. All I remember after that was his skin looking like melting chocolate.'

4.1.3 'When I was a young prep cook, I was asked to finish a crab cake project someone else had begun. They had dumped three (5 kilogram) cans of crab meat in a large mixing bowl, so I washed my hands and swept with fingers through the crab meat looking for pieces of shell or cartilage. Imagine my surprise when I discovered that the first cook had left the can lids in the bowl beneath the crab meat. I required stitches on seven fingers, I bled all over 200 dollars worth of crab, and I was out of work for three weeks.'

4.1.4 'Years ago, when I was managing a 27-seat breakfast/lunch/dinner greasy spoon (a small restaurant selling mostly fried foods), I had worked an unusually long open-to-close shift. At the end of the night during clean up, I may have forgotten to turn off the one table-top fryer, or the thermostat went bad. But I'm pretty sure I checked and rechecked to make sure it was off. Either way, after locking up, getting home, and getting ready for bed, there was a knock on my door. It was a cabbie friend of mine telling me that the front of the restaurant was fully engulfed in flames. It seems that the fry oil overheated and caught fire. The flames reached the weak link on the cable actuator for the Ansul system, which in turn blew with such force directly into the burning fry oil that it forced a lot of the flaming oil outward onto the salad bar, counter tops, tables, etc. Fortunately, the fire station was only four blocks away, so they were able to control it quickly enough that it didn't spread. It took us at least eight weeks to rebuild the interior, but to a much busier restaurant than we had ever been before.'

(4 × 2) (8)

4.2 Name the FIVE main reasons why accidents take place in kitchens and workplaces. (5)

4.3 The Occupational Health and Safety Act was implemented to provide for the health and safety of people at work.

Explain FIVE legal obligations that the employer must adhere to and THREE obligations the employee must adhere to according to this Act. (5 + 3) (8)

4.4 All companies are obliged to have an emergency plan.

Discuss FIVE important factors that one should consider when drafting an emergency plan. (5)

4.5 Discuss SIX ways in which you do NOT get HIV/AIDS. (6)

4.6 Discuss EIGHT symptoms of HIV. (8)

4.7 It is recommended that every employer have a workplace programme in place for staff that may be HIV positive.

Give advice to employers who do not comply with this and explain what they could improve on. (5)

4.8 Drug abuse is unfortunately also a cause for concern within the food industry.

Name FIVE hallucinogenic drugs. (5)

[50]

QUESTION 5

5.1 Define the term *hygiene.* (2)

5.2 Discuss personal hygiene under the following headings:

5.2.1 Care of hair (5)

5.2.2 Care of teeth (5)

5.2.3 Care of feet (5)

5.3 Many chefs smoke within the food industry as they feel it alleviates stress and stressful situations; however, there are several reasons why smoking is not permitted within the food industry.

Discuss FOUR reasons. (4)

5.4 Name and explain THREE ways in which pests can be prevented in the food industry. (6)

5.5 Read the following passage and answer the questions.

RESTAURANT OWNER IN HOT WATER OVER FOOD POISONING

A North West restaurant owner faces a charge of attempted murder and food poisoning after 18 customers were treated for suspected poisoning, police said on Sunday.

'Police swiftly responded to a call [on Saturday] when 18 victims passed out as a result of eating food they bought from a restaurant at the Rustenburg bus rank,' said Constable Provia Tseke in a statement.

All 18 victims were taken to the Job Shimanke Tabane Hospital in Rustenburg in serious but stable conditions.'

The 18 were discharged from hospital at 3 pm, three hours after eating the food. Rustenburg police have opened a case against a 38-year-old woman following the incident.

'A case of food poisoning and attempted murder has been opened against the owner of the restaurant and a sample of the food has been taken to the laboratory. Investigation is still underway,' said Tseke.

5.5.1 Discuss THREE general characteristics of microorganisms. (3)

5.5.2 Food poisoning can be very severe. Discuss FIVE symptoms of food poisoning. (5)

Copyright reserved

5.5.3 Bacteria can be found in high-risk foods and can cause food poisoning.

Name FIVE high-risk foods. (5)

5.5.4 Name SIX factors that influence the growth of microorganisms. (6)

5.5.5 Identify FOUR ways in which microorganisms can be destroyed. (4)

[50]

QUESTION 6

6.1 Under ideal conditions, bacteria populations will grow and multiply in various stages.

Name the FOUR stages and explain each stage briefly. (4 × 2) (8)

6.2 Name THREE uses for yeast in the food industry. (3)

6.3 Define the following terms:

6.3.1 Sterilant

6.3.2 Sanitiser

6.3.3 Detergent

(3 × 3) (9)

6.4 Name THREE reasons why you as a food handler should promote cleaning. (3)

6.5 Discuss THREE disadvantages of using steam as a cleaning method within the food industry. (3)

6.6 Explain FOUR objectives and principles of cleaning. (4)

6.7 When using a sanitiser in the kitchen, which THREE qualities must it have? (3)

6.8 Not everyone can be a housekeeper. Which FIVE qualities should a good housekeeper possess to be successful? (5)

6.9 Discuss how the housekeeping team should clean the above bedroom before the next guests check in for their stay. (12)
