MATHEMATICAL LITERACY

PAPER 1 · PRACTICE A · MARKING GUIDELINE

MARKS: 100

Marking guideline for the Academic Central NC(V) Level 4 Mathematical Literacy paper 1 · practice a.

Written by Academic Central for practice, following the NC(V) subject guidelines for NC(V) Level 4. It is not a Department of Higher Education and Training marking guideline.

How to mark: each ✓ is one mark. Give method marks for correct working even if the final answer is wrong (consistent accuracy). Accept other correct methods and well-reasoned advice.

QUESTION 1

1.1.1 $850 \times \text{R}10{,}84$ ✓ $= \text{R}9\,214{,}00$ (20 years) ✓; $850 \times \text{R}10{,}09 = \text{R}8\,576{,}50$ (30 years) ✓ (3)

1.1.2 $9\,214 \times 240$ ✓ $= \text{R}2\,211\,360$ ✓; $8\,576{,}50 \times 360 = \text{R}3\,087\,540$ ✓ (3)

1.1.3 R876 180 more ✓; choose 20 years if they can afford the higher payment, because it saves a lot of interest ✓ (2)

1.2.1 Option 1: $20\,000(1 + 0{,}075 \div 12)^{60}$ ✓ $= \text{R}29\,065{,}89$ ✓; Option 2: $20\,000(1 + 0{,}08 \times 5)$ ✓ $= \text{R}28\,000$ ✓ (4)

1.2.2 Option 1 ✓, by R1 065,89 ✓ (2)

1.3.1 $15\,000 \times 1{,}04$ ✓ $= \text{R}15\,600$ ✓ (2)

1.3.2 $15\,000 \times 1{,}06$ ✓ $= \text{R}15\,900$ ✓ (2)

1.3.3 Worse off ✓ – prices rose more than her salary, so she can buy less than before (about R300 less buying power per month) ✓ (2)

1.4.1 $48\,500 - 21\,300$ ✓ $= \text{R}27\,200$ ✓ (2)

1.4.2 Expenses $= 6\,000 + 12\,000 + 2\,450 = \text{R}20\,450$ ✓; $27\,200 - 20\,450$ ✓ $= \text{R}6\,750$ ✓ (3)

1.4.3 $\frac{6\,750}{48\,500} \times 100$ ✓✓ $= 13{,}92\%$ ✓ (3)

1.5 $420\,000 - 370\,500 = 49\,500$ ✓; $0{,}31 \times 49\,500 = 15\,345$ ✓; $77\,362 + 15\,345 = \text{R}92\,707$ ✓; $92\,707 - 17\,235$ ✓ $= \text{R}75\,472$ per year ✓; $\div 12$ ✓ $= \text{R}6\,289{,}33$ per month ✓ (7)

[35]

QUESTION 2

2.1.1 $6 \times 5 = 30\ \text{m}^2$ ✓; $2 \times 2 = 4\ \text{m}^2$ ✓; $30 - 4 = 26\ \text{m}^2$ ✓ (3)

2.1.2 $26 \times 1{,}1 = 28{,}6\ \text{m}^2$ ✓; tile $= 0{,}6 \times 0{,}6 = 0{,}36\ \text{m}^2$ ✓; $28{,}6 \div 0{,}36 = 79{,}44$ ✓ → 80 tiles ✓ (4)

2.1.3 $80 \div 4 = 20$ boxes ✓; $20 \times \text{R}289$ ✓ $= \text{R}5\,780$ ✓ (3)

2.2.1 $8 \times 4 \times 1{,}5 = 48\ \text{m}^3$ ✓✓ $= 48\,000\ \ell$ ✓ (3)

2.2.2 $48\,000 \div 25 = 1\,920$ minutes ✓✓ $= 32$ hours ✓ (3)

2.2.3 $48\,000\ \ell = 48\ \text{k}\ell$ ✓✓; $48 \times \text{R}28{,}40$ ✓ $= \text{R}1\,363{,}20$ ✓ (4)

[20]

QUESTION 3

3.1.1 A: $312 \div 100 = 3{,}12$ h ✓ $= 3$ h 7 min ✓; B: $268 \div 75 = 3{,}57$ h ✓ $= 3$ h 34 min ✓ (4)

3.1.2 A: $312 \times 8 \div 100 = 24{,}96\ \ell$ ✓; $24{,}96 \times 23{,}45$ ✓ $= \text{R}585{,}31$ ✓; B: $268 \times 8 \div 100 = 21{,}44\ \ell$ ✓; $21{,}44 \times 23{,}45$ ✓ $= \text{R}502{,}77$ ✓ (6)

3.1.3 $502{,}77 + 62$ ✓ $= \text{R}564{,}77$ ✓ (2)

3.1.4 Either route with TWO valid reasons ✓✓✓, e.g. Route A – about 27 minutes faster and easier, safer driving; or Route B – about R20,54 cheaper and shorter distance (3)

[15]

QUESTION 4

4.1.1 Class A's median (61%) is higher than Class B's (55%) ✓; Class A's pass rate (78%) is higher than Class B's (64%) ✓; Class B's mean may be pushed up by a few very high marks ✓, as its range is much larger ✓ (4)

4.1.2 Class A ✓ – its range (45%) is smaller, so the marks are closer together ✓ (2)

4.1.3 $78\% \times 32$ ✓ $= 24{,}96 \approx 25$ students ✓ (2)

4.1.4 A few students scored very high marks (outliers) ✓, which raises the mean but not the median ✓ (2)

4.2.1 $\frac{1\,610 - 1\,250}{1\,250} \times 100$ ✓✓ $= 28{,}8\%$ ✓ (3)

4.2.2 A line graph ✓ – it shows the trend over time / a bar graph (accept with the reason that it compares separate years) ✓ (2)

4.3 Any THREE: the axis does not start at zero ✓; the sample is small or biased ✓; only the averages that support the claim are given ✓; percentages without actual numbers; data taken out of context (3)

4.4 A small sample may by chance not represent the whole population ✓; a larger sample gives results closer to the truth / more reliable ✓ (2)

[20]

QUESTION 5

5.1.1 $\frac{1}{500}$ ✓ (1)

5.1.2 $\text{Expected winnings} = \frac{1}{500} \times 5\,000 = \text{R}10$ ✓; $\text{expected value} = 10 - 20 = -\text{R}10$ ✓; on average a person loses R10 per ticket bought ✓ (3)

5.2 $10 \times 10 \times 10 \times 10 = 10\,000$ possible PINs ✓; $\text{P} = \frac{1}{10\,000}$ ✓ (2)

5.3 Insurance costs $12 \times 89 = \text{R}1\,068$ per year ✓; expected loss $= \frac{1}{25} \times 6\,000$ $= \text{R}240$ per year ✓; on average the insurance costs more than the expected loss ✓; but a student who cannot afford to replace the phone may still choose insurance for peace of mind (any sensible advice) ✓ (4)
