MARKING GUIDELINE

NATIONAL CERTIFICATE

INFORMATION PROCESSING N4

17 MAY 2019

This marking guideline consists of 32 pages.

Copyright reserved

GENERAL REMARKS

ACCURACY ERRORS must be indicated with a RED /. REPETITIVE accuracy errors must be indicated with a RED CIRCLE.

DISPLAY ERRORS must be indicated with a BLUE X. REPETITIVE display errors must be indicated with a BLUE CIRCLE.

THE CANDIDATE CANNOT FAIL BECAUSE HE/SHE COULD NOT COMPLETE OR PASS THE TIMED ACCURACY TEST.

INDICATE AT THE END OF THE SPEED TEST THE SPEED OBTAINED WITH PASS 35 WPM/PASS 40 WPM/FAIL WHERE APPLICABLE IN THE FOLLOWING WAY:

Pass 35 wpm/Pass 40 wpm/Fail; Errors; Mark

INDICATE ON THE FRONT OF THE FOLDER DIRECTLY NEXT TO THE MARK OBTAINED FOR QUESTION 1:

Pass 35 wpm/Pass 40 wpm/Fail

If the candidate did not hand in QUESTION 1, indicate by drawing a line through the block for the mark next to QUESTION 1 on the front of the folder and writing Fail at the appropriate positions.

INDICATE ON THE FRONT OF THE FOLDER JUST BELOW THE CIRCLE FOR THE MARKS OBTAINED:

Pass 35 wpm/Pass 40 wpm/Fail

Should a candidate fail the examination (less than 40%) and pass the timed accuracy test, the word Fail replaces the Pass 35 wpm/Pass 40 wpm, as a candidate cannot fail the question paper as a whole and get recognition for the wpm.

THE MARK FOR TYPING TECHNIQUE (200) IS ADDED TO THE WORD PROCESSING MARK (100) TO OBTAIN A MARK OUT OF 300 WHICH IS PROCESSED TO A MARK OUT OF 100 (PERCENTAGE). THIS MARK MUST BE SENT TO THE NATIONAL DEPARTMENT.

QUESTION 1: TIMED ACCURACY TEST **MARKS: 20**

MARK ACCURACY ERRORS ONLY. MARK WITH CARE AS IT MAKES A DIFFERENCE TO THE RESULTS. USE THE ENCLOSED DEPARTMENTAL SCHEDULE.

Indicate accuracy errors with a red slash (/).

One or more incorrect characters in a word – 1 error.

Do not penalise incorrect margins.

Do not penalise incorrect line spacing.

Do not penalise incorrect hyphenation.

Do not penalise incorrect capital/small letters.

Do not penalise incorrect letter spaces.

Do not penalise incorrect alignment.

Do not penalise incorrect display errors.

Do not penalise if a whole line or paragraph is left out and keyed in at another position.

When exactly the same word is repeatedly keyed in incorrectly, it is penalised once only per question. Thereafter it is encircled as a repetitive error.

Omission of words: Count the first 5 strokes and thereafter every 10 strokes as 1 error each. If the last few strokes at the end are 5 or more, count as another error. If the last few strokes at the end are less than 5, ignore.

If 35 wpm is not completed, count back as indicated in the marking guideline.

The highest mark obtained must be indicated. The highest speed passed must be indicated.

QUESTION 1 (CONTINUED)

The quality of a stream or river is often a good indication of the way of life within a community through which it flows. It is an indicator of the socio-economic conditions and environmental awareness and attitude of its users. Everything that happens in a catchment area is reflected in the quality of the water that flows through it because the results of human activity and lifestyle ultimately end up in rivers through runoff.

Healthy streams, wetlands and rivers support a great variety of water life. Rain water and tumbling mountain streams contain high levels of oxygen. Much of the oxygen comes from the atmosphere through rain, tumbling water in fast-flowing streams and photosynthesis. Nutrient substances are washed into the system providing important growth chemicals and sources of food.

Water plants in turn photosynthesise and provide life-supporting oxygen and other food sources for water organisms that interact in a complex web of life. All life in the water is dependent on the interaction within the river itself and in the surrounding catchment.

These processes can either maintain a healthy ecosystem or disrupt ecological processes and degrade the water supply. Rivers and streams owe their existence to the nature of catchments and the relationship between rainfall and evaporation. Rivers are open systems where the exchange of material and energy within the environment occurs all the time. It is difficult to treat rivers as ecosystems because they are important pathways for the flow of energy and the circulation of nutrients across the boundaries of habitats.

QUESTION 1 (CONTINUED)

Changes in water quality occur naturally along the length of a river. However, these changes may be significantly influenced by human activities. Industries, agriculture and urban settlements produce nutrient concentrates and toxic substances which can affect water quality.

35 wpm

Water quality is also defined as water which is safe, drinkable and appealing to all life on earth. It should contain no chemical or

[20]

TOTAL SECTION A: 200

SECTION B

1. The total of the section is 100 marks. Part A of each question is 80% accuracy and 20% display. Part B is 80% processing and 20% accuracy.

2. Part A of each question has to be keyed in correctly, except for Q6A that is already copied to your hard drive/compact disk/memory stick.

3. Part B of each question has to be processed according to the processing instructions.

4. ONE mark per error deducted – accuracy as well as display and processing.

   ACCURACY ERRORS = All keying-in errors
   DISPLAY ERRORS = Display errors
   PROCESSING ERRORS = All processing instructions

5. Questions not completed (only part A) is marked accordingly. In part B the candidate is penalised for each processing not done.

   If only ¼ of a question is completed, only ¼ of the original mark is used for the marking of the question. If only ½ of a question is completed, only ½ of the original mark is used. If only ¾ of a question is completed, only ¾ of the original mark is used.

   EXAMPLE

   Total marks = 20: Accuracy = 16; Display = 4

   ½ of the question is completed, mark as follows:

   ½ OUT OF 16 = 8 MARKS
   ½ OUT OF 4 = 2 MARKS

   The question will be marked out of 10 but the mark will be out of 20:

   6 1 = 7 = 7
   8 2 = 10 = 20
   2 1 errors

QUESTION 6B (CONTINUED)

EXAMINATION NUMBER 21 header, left 21 header, right, uc QUESTION 6B

1 margins, alignment, l/s 2 A4 portrait, tab stops/indent, hyphen 3 CN 12 pt, uc/lc, letter spaces
4 [water] – uc, italics

WHAT IS *WATER* POLLUTION? 5 insert, Arial 16 pt, uc, bold, u/line

9 in figures 3 uc

The saying goes that *WATER* is life which is INDEED true. With about 70 percent of earth being covered by *WATER*, it is undeniably one of our biggest resources of *WATER*.

7 NP 10 insert, italics

The contamination of WATER bodies simply means WATER pollution.

7 NP

Pollution of *WATER* occurs when substances that affect the *WATER* negatively are discharged into it.

7 NP 8 trs

WATER pollution is an appalling problem powerful enough to lead the world on a path of destruction.

7 NP

WATER is a good solvent enabling most pollutants to dissolve in it easily thus contaminating it.

7 NP 11 del (dated 2008) 9 in words

According to a report in *The Economist* over one thousand children die each day of diarrhoeal sickness in India and the numbers have increased alarmingly in the last 5 years. *Let us now study the causes of WATER pollution.* 9 in figures 12 insert, italics

13 page break

QUESTION 6B (CONTINUED)

EXAMINATION NUMBER 21 header, left 21 header, right, uc QUESTION 6B

14 page number top centre 15 paragraphs numerical order 2 indent 3 letter spaces
6 paragraph headings uc

2

1. **INDUSTRIAL WASTE:** Industries produce huge amounts of waste that contains toxic chemicals and pollutants which can cause air pollution and damage to mankind and the environment.

7 NP

2. **SEWAGE AND WASTE *WATER*:** The sewage and waste *WATER* that is produced by each household is chemically treated and released into the sea as fresh *WATER*.

7 NP 16 stet

3. **MINING ACTIVITIES:** In mining rock is crushed to extract underground coal and other minerals.

7 NP

4. **MARINE DUMPING:** The garbage produce by each household in the form of paper, aluminium, rubber, glass, plastic and food are deposited into the sea in some countries.

17 sp

5. **ACCIDENTAL OIL LEAKAGE:** Oil spills pose a huge concern as large amounts of oil enter the sea. Oil does not mix with *WATER*. This causes huge problems for local marine life such as fish, birds and sea otters.

7 NP

6. **BURNING OF FOSSIL FUELS:** When burnt fossil fuels like coal and oil emit substantial amounts of ash into the atmosphere.

7 NP

7. **CHEMICAL FERTILISERS AND PESTICIDES:** Chemical fertilisers and pesticides are used by farmers to protect crops from insects and bacteria. *They are useful for the plants' growth.* 18 insert, ital

7 NP

8. **LEAKAGE FROM SEWER LINES:** A small leakage from sewer lines can contaminate the underground *WATER* and make it unfit for humans to drink.

7 NP

9. **GLOBAL WARMING:** The increase in the temperature of the earth due to the greenhouse effect results in global warming.

7 NP

10. **RADIOACTIVE WASTE:** Nuclear energy is produced using nuclear fission. 19 del [or fusion]

7 NP

11. **URBAN DEVELOPMENT:** As the population grows so does the demand for housing, food and clothes.

QUESTION 8A: DISPLAY WORK MARKS: 14

EXAMINATION NUMBER 4 header, left 4 header, right, uc QUESTION 8A

Some wastewater, fertilisers & sewage contain high levels of nutrients.

If they end up in water bodies they encourage algae & ¼ weed growth in / water.

This makes / water undrinkable & even clogs filters.

When hazardous substances coming into contact with this ½ surface water and dissolve or mix with / water, it is called surface water polution.

Water bodies have micro-organisms. These include aerobic & anaerobic organisms. ¾

When too much biodegradable matter ends up in water it encourages more micro-organism growth & they use up more oxygen in / water.
