WHAT IS COFFEE?

11 upper case, bold, Goudy Stout 16 pt, centred

Coffee is a brewed drink prepared from roasted coffee beans which are the seeds of berries from the coffee plant.

12 line numbers **13 start at 10**

The plant was exported from Africa to countries around the world and coffee plants are now cultivated in over 70 countries, primarily in the equatorial regions of the Americas, Southeast Asia, India and Africa. The two most commonly grown are the highly regarded Arabica, and the less sophisticated but stronger and hardier Robusta.

Once ripe, coffee berries are picked, processed, and dried. Dried coffee seeds (referred to as beans) are roasted to varying degrees, depending on the desired flavour. Roasted beans are ground and brewed with near-boiling water to produce coffee as a beverage.

Coffee is slightly acidic and can have a stimulating effect on humans because of its caffeine content. It is one of the most popular drinks in the world and can be prepared and presented in a variety of ways[i]. It is usually served hot, although iced coffee is also served. Clinical studies indicate that moderate coffee consumption is benign or mildly beneficial in healthy adults, with continuing research on whether long-term consumption inhibits cognitive decline during aging or lowers the risk of some forms of cancer.

Coffee is a major export commodity: it is the top agricultural export for numerous countries and is among the world's largest legal agricultural exports. It is one of the most valuable commodities exported by developing countries. Green (unroasted) coffee is one of the most traded agricultural commodities in the world. Some controversy is associated with coffee cultivation and the way developed countries trade with developing nations and the impact of its cultivation on the environment with regard to clearing of land for coffee-growing and water use. Consequently, the markets for fair trade coffee and organic coffee are expanding.

CAFFEINE AFFECTS DIFFERENT PEOPLE DIFFERENTLY **23 upper case, bold**

Despite their disagreement on its long-term effects, many health experts acknowledge that people react differently to caffeine. It helps to keep some aware and focused on the task at hand while it gives others long bursts of **energy** that interrupt their regular habits like sleeping, and can even give them heart palpitations or jitters.

24 first line indented

You can figure out how you're affected by caffeine to decide if you should drink it when studying. Try consuming caffeine and keep track of your reactions. If you find that you focus better on studying after a certain amount of caffeine in your system, you may be the kind of student it helps instead of hinders.

Caffeine's effects change depending on the quantity **25 bold, underline**

As mentioned previously caffeine can be good for certain students, but larger amounts can be a problem. Most experts say drinking 3-4 cups of coffee (which is full of caffeine) is healthy and doesn't pose any health threats. But if you rely on more than this amount, you're going to find yourself running into problems such as not being able to sleep or feeling nervous and antsy. Getting these side effects will influence your studying negatively as you'll be distracted by the way your body is acting instead of focusing on your academics.

36 find and replace, bold and 14 pt
37 4 occurrences

Also, you may want to consider only drinking half of an **energy** drink because a can may constitute more than one serving. If you're not paying attention to how many **energy** drinks you down during a study session, you're more likely to have problems recovering later on.

26 delete paragraph

Forty percent of 18- to 24-year-olds, the ages when students usually attend college, drink coffee every day[1]. I also found that more 18- to 24-year-olds are turning to coffee rather than caffeinated sodas (Aubrey, 2013).
